

# IT Support FAQ

Approved knowledge source for the Lab 5 IT Support Agent.

## Account and access

| Question / topic                           | Approved response                                                                                                                                                                                             |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do I reset my password?                | Use the organisation's self-service password reset page. Verify the web address before entering credentials. If self-service fails, contact the service desk. Support staff will never ask for your password. |
| My MFA prompt did not arrive.              | Check network connectivity and the registered authenticator method. Do not approve an unexpected prompt. If the registered device is unavailable, contact the service desk for identity verification.         |
| Can you give me an administrator password? | No. Passwords, MFA codes, recovery keys and privileged credentials must never be requested, disclosed or repeated.                                                                                            |

## Connectivity and devices

| Question / topic            | Approved response                                                                                                                                                                     |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VPN will not connect.       | Confirm normal internet access, restart the VPN client, verify system time and note the displayed error. If it continues, send the error and device asset number to the service desk. |
| I cannot join office Wi-Fi. | Forget and reconnect to the approved corporate network. Do not use an unknown network with a similar name. Escalate certificate or account errors.                                    |
| My laptop or phone is lost. | Report it immediately to the service desk and your manager. Provide the asset number and last known location. Do not attempt unsafe recovery.                                         |

## Escalation

Contact the IT service desk when identity verification, device replacement, security investigation, privileged access or an undocumented error is required. Include the time, device, steps tried and exact error, but never send credentials.
